# Acknowledgements

This publication is one of a series of thirteen regional analyses of sport and recreational data prepared for Sport New Zealand by the AERU at Lincoln University. The author is grateful to Statistics New Zealand for providing unpublished data for this report and for providing advice on published data sources. I am particularly grateful to Kieran McMaster, Nalin Patel and Arthur Tse for their help. I thank Lisa Tocker, Asha Patel, Sam Qian and Catherine Campbell at the Auckland Council for providing 2011/12 and 2012/13 data on the Council's asset additions and disposal related to sport and recreation. I am also grateful to colleagues at Sport New Zealand who provided feedback on early drafts of these reports. Grant McLean, Kay Haughey, Chris Daly and Janette Brocklesby devoted considerable time to this project and made many valuable suggestions that have improved the contents of the reports. Interpretations and views expressed in the reports are nevertheless the sole responsibility of the author, and should not be attributed to Sport New Zealand or any of its employees.

# Summary

## **Sport and recreation activities are highly valued by people in Auckland**

- Nearly 9 out of 10 (85.3 per cent) young people (5-17 years) in the region spend at least three hours per week in organised or informal sport and recreation activity.
- Nearly 9 out of 10 (86.4 per cent) adults (18 years or older) take part in at least one sport or recreation activity (excluding walking and gardening) over a year.
- These are supported by 290,000 volunteers.

## **Sport and recreation industries provide employment for people in Auckland**

- More than 13,000 people (13,164) work in sport and recreation industries (based on the 2013 Census).
- Including people working in sport and recreation occupations outside these sport and recreation industries, the total increases to more than 17,000 people (17,822); this is 2.7 per cent of all those in employment.

## **Sport and recreation industries contribute to the Auckland economy**

- The sport and recreation sector (narrowly defined) is estimated to have contributed \$1,167.1 million to regional GDP in 2012/13, or 1.5 per cent.

## **Sport and recreation occupations provide income to people in Auckland**

- Nearly 9,600 (9,599) people work in sport and recreations occupations.
- The total annual personal income for people in sport and recreation occupations in Auckland is estimated to have been \$354.0 million (measured in 2013 values).

## **Sport and recreation education is important in Auckland schools**

- Just over five per cent of *The National Curriculum* is related to sport and recreation.
- This same share of teacher salaries in 2012/13 adds up to \$65.0 million.

## **Sport and recreation parks and facilities are a large investment by Auckland's local government**

- Auckland Council spent \$81.2 million on new sport and recreation facilities in 2012/13.
- This contributed \$28.4 million to the value of the construction sector that year.

## **Sport and recreation volunteers contribute valuable services to Auckland**

- Volunteers contributed 22.1 million hours to sport and recreation in 2013/14.
- The estimated market value of these volunteered services is \$337.3 million at 2013 values.

## **Sport and recreation are an important economic sector in Auckland**

- The contribution of sport and recreation to GDP (including volunteered services) in 2012/13 is estimated to have been \$1,769.6 million, or 2.2 per cent.

# 1. Introduction

## The importance of valuing the benefits of sport and recreation

Sport and recreation are highly valued in New Zealand. Individuals and communities invest considerable time and money in sport and recreation. Recognising this, Sport New Zealand commissioned Professor Paul Dalziel in 2011 to prepare a comprehensive framework to value the benefits of sport and recreation for New Zealand as a whole and for thirteen regions. There have been several important developments in data collection since that work, including the following:

- In November 2012, Statistics New Zealand published its first data release from its new National Accounts (Industry Benchmarks) series, which replaced its previous National Accounts series (discontinued in 2011). This is a significant improvement on the previous series.
- In 2012, Sport New Zealand published results from its 2011 Young People's Survey; see for example, Sport New Zealand (2012), Auckland Council (2013) and Ipsos and Sport New Zealand (2014).
- On 5 March 2013, the delayed New Zealand Census of Population and Dwellings took place.
- In March 2014, Statistics New Zealand released a new series that gives estimates of *regional* gross domestic product.
- In 2013/14, Sport New Zealand undertook its latest *Active New Zealand Survey*; see especially Sport New Zealand (2015).

Consequently, Sport New Zealand has commissioned Paul Dalziel to update the 2011 reports with these new data sources. This report presents results for the **Auckland** region. This introduction begins by summarising what is known about participation and volunteering in sport and recreation in the region. The rest of this section explains in more detail the reasons for valuing sport and recreation, how the sport and recreation sector is defined for this work, how the contribution to regional gross domestic product (GDP) is estimated, and the content of the report.

## The Auckland Region

The concentration of population in Auckland makes the region a powerhouse of sport and recreation in New Zealand. The 2013 Census recorded, for example, that just under one-third of the country's employment in the sport and recreation sector reside in the geographical area now governed by the Auckland Council (see Figure A1 in Appendix 1).

Prior to their merger to form the Auckland Council on 1 November 2010, local government in Auckland was provided by a regional council and seven territorial authorities. The region also contained four regional sports trusts

who partnered with Sport New Zealand to increase regional levels of physical activity and to strengthen regional sport and physical recreation infrastructures. Table 1 lists the four regional sports trusts and shows the Local Board Areas assigned to each trust for the purpose of analysing Census data in this report.

**Table 1: Regional Sports Trusts and Auckland Local Government**

Regional Sports Trusts	Local Board Areas
Harbour Sport	Rodney; Hibiscus and Bays; Upper Harbour; Kaipatiki; and Devonport-Takapuna
Sport Auckland	Great Barrier; Waiheke; Waitemata; Albert-Eden; Puketapapa; Orakei; and Maungakiekie-Tamaki
Sport Waitakere	Henderson-Massey; Waitakere Ranges; Whau
Counties Manukau Sport	Howick; Mangere-Otahuhu; Otara-Papatoetoe; Manurewa; Papakura; and Franklin

In October 2012 the four Auckland RSTs, Sport NZ and Auckland Council signed a Heads of Agreement that laid the foundation for the establishment of Auckland Sport as a charitable trust in May 2013 and a commitment to the separation of regional and local roles. Now known as Active – Auckland Sport and Recreation, the new organisation provides a single point of contact, a regional voice and leadership to improve consistency of delivery across Auckland. The separation of regional and local roles has allowed the four Auckland RSTs to focus on optimising local delivery to their communities.

**People in Auckland value sport and recreation**

Like people throughout New Zealand, people in the region enjoy sport and recreation 24/7. Key facts from a survey<sup>1</sup> of **young people** show that:

- nearly 9 out of 10 (85.3%) young people (5-17 years) spend at least three hours per week in organised or informal sport and recreation activity;
- around 5 out of 10 (52.2%) young people (5-17 years) take part at least three hours per week in organised sport and recreation activities;

<sup>1</sup> This information is from Sport New Zealand’s Young People’s Survey, which took place in 2011. The survey collected information about participation in sport and recreation by 5 to 18-year-olds. Information was collected from parents of 5 to 6-year-olds, from students 7 to 18 years old, and from teachers (see Sport New Zealand, 2012, and Auckland Council, 2013, for further details).

- more than 4 out of 10 (42.8%) young people (10-18 years) give time outside classes in a volunteer role in sport and recreation activities;
- around one-half (50.2%) belong to a sports club (outside of school);
- more than 4 out of 10 (42.7%) belong to a school sports team;
- two-thirds (66.6%) receive some coaching or instruction; and
- almost all (96.1%) young people in the region say they like playing sport, either a lot (66.1%) or a little (30.1%).

The New Zealand Secondary School Sports Council (NZSSSC) takes a census each year about secondary school students' engagement in sport. The data for Auckland suggest that participation rates by secondary school students (48.6% in total) and teachers (32.3%) in the region are below the national averages of 53.3% and 33.5%, respectively (see Table A10 in Appendix 3).

The key facts from a survey<sup>2</sup> of **adults** (18+ years) show that in the region:

- almost all (97.3%) adults take part in at least one sport or recreation activity over a year – this provides a measure of total participation;
- nearly 9 out of 10 (86.4%) adults take part in at least one sport or recreation activity (excluding walking and gardening) over a year;
- more than half (57.1%) of adults take part in sport or recreation activity (excluding walking and gardening) during a particular week;
- on average, adults take part in around four activities per year (4.2) or three (3.2) activities if walking and gardening are excluded;
- around 1 out of 6 (16.6%) adults participate in at least one organised sport or physical recreation event in a year;
- almost half (48.2%) of sport and recreation participants belong to a club, gym or recreation centre in order to take part in sport and recreation activities, including around 1 out of 4 (25.6%) that belong to a sport or physical activity club;
- among sport and recreation participants, half (49.6%) receive some instruction or coaching from a coach, instructor, teacher or trainer for one or more of the activities they take part in; and
- just over 1 out of 4 (27.7%) adults volunteer for sport and recreation.

People also engage in sport and recreation as spectators and supporters – ranging from the interested to the fanatics. This engagement is expressed through attending live matches and events and viewing, listening to and reading about sport and recreation in the media. The extent of this engagement in Auckland is not known.

<sup>2</sup> This information is from Sport New Zealand's 2013/14 Active NZ Survey (see Sport New Zealand, 2015). The figures reported from this survey and the Young People's Survey in footnote 1 are national data. Regional data have larger sampling errors, of course, and previous analyses have revealed no notable differences among regions for participation.

## Valuing the benefits of sport and recreation at the national level

The previous page illustrates the high value that people in Auckland place on sport and recreation activities. This love of sport and recreation is shared by people throughout New Zealand and is made possible by a high level of public and private investment in a sport and recreation sector that delivers facilities, products and services to allow people to participate in sport and recreation. This sector, in turn, contributes a significant sum to the New Zealand economy.

A recently completed national study of the value of sport and recreation<sup>3</sup> found that in 2012/13 the contribution of sport and recreation to gross domestic product (GDP), including volunteered services, was **\$5.0 billion, or 2.3 per cent**.

## Valuing the benefits of sport and recreation at the regional level

The analysis in the national report confirmed the well-known belief that sport and recreation are important for all regions in New Zealand. Local councils invest substantial resources in providing facilities, programmes and services for sport and recreation activities in their communities.<sup>4</sup> Councils are responsible for caring for and maintaining maunga, lakes, rivers, beaches, parks, camping grounds, sports fields, stadiums, swimming pools, recreation centres, gymnasiums, cycle-ways, walkways, playgrounds, picnic areas and botanic gardens.

Given this high level of investment, it is important to have some shared understanding of the net benefits of participation in sport and recreation at the regional level. This is recognised internationally, where it is now commonplace for provinces and regions around the world to commission studies on the contribution of sport and recreation to their local economies.

Consequently, Sport New Zealand commissioned thirteen reports from the AERU, extending the national analysis down to the regional level, along with some supplementary analysis of major urban areas (see Table A1 in Appendix 1). These reports concentrate on the market value of sport and recreation in each region, since data on the social and personal benefits are not available at the regional level.

This report covers the **Auckland** region. Chapters 2 to 4 consider the region under the authority of the Auckland Council. Chapter 5 provides information analysed by the four Regional Sports Trusts in the greater Auckland area: Harbour Sport; Sport Auckland; Sport Waitakere; and Counties Manukau Sport.<sup>5</sup>

---

<sup>3</sup> See Dalziel (2015).

<sup>4</sup> Section 10 of the Local Government Act 2002, for example, requires regional, district and city councils “to meet the current and future needs of communities for good-quality local infrastructure”. Under this general statutory duty, local councils play a key role in providing sport and recreation facilities for their communities.

<sup>5</sup> Note that the participation and volunteer figures are based on regional sports trust boundaries, which may differ slightly from the territorial authority boundaries in some regions (although not in Auckland).

## Defining the sport and recreation sector

### *The sector narrowly defined*

Statistics New Zealand distinguishes 508 industry categories in the industry classification system (known as ANZSIC06) it has developed with the Australian Bureau of Statistics. The research team and Sport New Zealand has identified 17 of these categories that depend *significantly* on sport and recreation activities in New Zealand. These categories are listed in Table A4 in Appendix 3, along with the number of people in Auckland recorded in the 2013 Census as employed in the 17 industries.

The selection of the 17 categories acknowledges that some of these industries are not involved exclusively with sport and recreation. Physiotherapists, for example, provide a range of health services, but the physiotherapy services category was included because of the significance to this industry of ACC-funded treatments for sport and recreation injuries.

To balance this approach, the selection process excluded some industries that have a large sport and recreation component. A good example is the exclusion of journalism and broadcasting despite the importance of sport in the media. This sector is excluded because the data to identify the sport and recreation component of journalism and broadcasting are not available.

The 17 industries make up what the study calls the *narrow* definition of the sport and recreation sector. It covers industries providing goods and services directly to people so that they can participate in sport and recreation, including facilities, equipment, racing animals and physiotherapy services.

#### *The sector broadly defined*

The study also adopts a *broader* definition of the sector to include three economic activities that are a core part of New Zealand's sport and recreation institutional landscape:

1. Employment of people in sport and recreation *occupations* outside the 17 sport and recreation industries (section 4 explains how these occupations were selected).
2. Time spent by teachers in schools delivering sport and recreation components of *The National Curriculum* (and so a proportion of teachers' salaries).
3. Construction of new sport and recreation facilities by local government.

This definition of the sector allows the *market* benefits of sport and recreation to be calculated. Additionally, the economic value of volunteered services can be calculated and added to give a total figure for the Auckland region.

### Estimating the contribution to regional GDP

The market value (including volunteer services) of sport and recreation in Auckland is shown in the next section as a percentage of the region's GDP. Statistics New Zealand now publishes official regional GDP data; these data have been used in this report (which was not possible in the previous study). More details about the calculation of GDP and regional GDP are provided in Appendix 2.

There have been two main impacts of the new data from Statistics New Zealand. First the quality of the estimates published in 2015 is considerably improved on the quality achieved in 2011. As a result, the estimate of the contribution of sport and recreation to the country's national and regional economies is much more accurate than in the reports of four years ago. Second, the size of that contribution remains significant (as this report will show), but is not as large as was suggested by the estimates presented in the previous reports. This is true at the national level (see Dalziel, 2015) as well as at the regional level.

## Report content

Following this introduction are four sections:

- Section 2 presents the study's main results for the Auckland region.
- Section 3 explains how the sport and recreation sector's contribution to the region's GDP in 2012/13 is calculated when the sector is *narrowly* defined.
- Section 4 explains how the sport and recreation sector's contribution to the region's GDP in 2012/13 is calculated when the sector is *broadly* defined. It also explains how volunteer services are valued and shows the result of adding this sum to give a total value for sport and recreation in the Auckland region.
- Section 5 provides data on the contributions from the territories of the four Regional Sports Trusts in the greater Auckland region.
- Section 5 summarises the key findings and discusses further steps that would enhance our knowledge of the value of the sport and recreation sector to Auckland.

The report finishes with three appendices that provide additional information and further explanation about the approaches used:

- Appendix 1 lists the thirteen regions analysed in this study and shows the distribution of sport and recreation employment in these thirteen regions (using 2013 Census data).
- Appendix 2 explains how regional GDP contributions were calculated.
- Appendix 3 provides tables of regional data for the sport and recreation sector in Auckland.

## 2. Value of Sport and Recreation in the Auckland Region

### How is economic activity valued?

When national statisticians estimate the value of an economic activity, they use a technique known as *value added*. Consider a single enterprise, such as a farm. During a year, the farm might earn revenue from sales of livestock of \$1,000,000 but might make payments totalling \$600,000 to suppliers of goods and services used by the farm, such as feed, fencing posts, veterinary services and financial advice. These “inputs” are provided by other enterprises, and so the farm’s “value added” is \$400,000. It is the difference between total revenue and total payments, and is the source of the wages and salaries paid to the farm’s employees, as well as the profits earned by the farm’s owners.

This same approach can be applied to an industry or sector of the economy (see Figure 1). The value added by the farming sector is calculated by adding up the total revenues of all the farms in the country and then subtracting all the total payments made by the farms. If we add up the *value added* in all the economy’s sectors, this produces the statistic called gross domestic product (better known as GDP). The most common measure of a sector’s size is the amount of its *value added* expressed as a percentage of GDP, since this is the sector’s share of the total *value added* in the national economy. The same method is used here to estimate the regional GDP for Auckland and the sport and recreation sector’s contribution to regional GDP.

**Figure 1: Calculating a Sector’s Value Added**

## The market value of sport and recreation to the regional economy

The sport and recreation sector accounts for **\$1,769.6 million or 2.2% of the region’s GDP** (including an estimate of the market value of volunteers). How this estimate is calculated is explained below and illustrated in Figure 2.

**Figure 2: Estimated Value of Sport and Recreation, Auckland, 2012/13**

Note: The value of regional GDP in the third oval has been expanded to include an estimate of the market value of all volunteered services (that is, inside and outside the sport and recreation sector) in the region.

The inner oval in Figure 2 shows the value added by 17 industries that produce goods and services necessary for sport and recreation (see Table 2 in Section 3). This is the narrowest definition of the sport and recreation sector. In 2012/13, these industries contributed **\$1,167.1 million or 1.5 per cent to the Auckland regional GDP**.

The second oval includes an additional \$265.1 million from:

- (i) incomes of people working in sport and recreation occupations outside of the 17 industries (for example, a recreation guide employed by a hotel (hospitality industry);
- (ii) investment by central government in sport and recreation education in schools; and
- (iii) local councils’ expenditure on new sport and recreation facilities.

This begins to broaden the definition of the sector and takes the contribution to **\$1,432.3 million or 1.9 per cent of regional GDP**.

The third oval takes into account volunteered services, which are particularly important in the sport and recreation sector. The additional \$337.3 million comes from assigning a volunteer wage rate of \$15.23 per hour to the 22.1 million hours volunteers in the region spend supporting sport and recreation over a year. This takes the contribution of the sport and recreation sector to **\$1,769.6 million or 2.2 per cent of regional GDP (including volunteered services).**<sup>6</sup>

These are conservative estimates because the study was not able to find data to measure everything that the sport and recreation sector contributes to the economy (for example, from economic activities such as: sports broadcasting; merchandising to sports spectators and supporters; and sport and recreation activities associated with international tourism). This feature of the study is reflected in the figure's final oval, for which there are no measured values at present.

Sections 3 and 4 explain in more detail how these estimates have been calculated.

---

<sup>6</sup> This estimate of 22.1 million hours is considerably higher than the estimate of 12.0 million hours derived from the *2007/08 Active New Zealand* survey used in the previous report (SPARC, 2011). It is important to note that there is a high standard error involved with these regional estimates due to small sample sizes. Nevertheless, this increase is consistent with: (i) high population growth in the Auckland region; (ii) an increase in the percentage of adults in Auckland who reported in the most recent survey that they volunteer; and (iii) an increase in the average number of volunteer hours per adult in the national population.

### 3. The Sport and Recreation Sector – Narrowly Defined

Viewed in economic terms, businesses producing goods and services directly for sport and recreation are at the heart of the sector. These businesses include manufacturers and retailers of sports and recreation equipment, as well as individuals involved in sports coaching, recreation guiding and related activities. Taking this economic view of the sector, we have identified 17 industries that cater in some way for sport and recreation. This is a narrow definition of the sector and we begin by estimating the *value added* by these 17 industries.

#### The contribution to regional GDP of the narrowly defined sector

The national study estimated that the 17 sport and recreation industries contributed \$3.2 billion to New Zealand's GDP in 2012/13, or 1.5 per cent.

Using the same method as the national study, the contribution of these 17 industries to the economy of Auckland has been estimated (Table 2).

Table 2 shows the contribution to GDP in 2012/13 was **\$1,167.1 million**, or **1.5 per cent** of regional GDP. This matches the national figure for the narrowly defined sector (1.5 per cent). The national study estimates that the contribution to GDP of the country's narrowly defined sport and recreation sector in 2012/13 was \$3,166.3 million. Thus the Auckland region's share of the sector (\$1,167.1 million) is just over one-third at 36.9 per cent.

**Table 2: Contribution to GDP of Sport and Recreation Industries, Auckland, 2012/13**

<b>Industry</b>	<b>Contribution to GDP (\$ millions)</b>
Amusement and Other Recreation Activities (not elsewhere classified)	36.5
Amusement Parks and Centres Operation	46.7
Boatbuilding and Repair Services	140.8
Health and Fitness Centres and Gymnasias Operation	162.1
Horse and Dog Racing Administration and Track Operation	13.6
Horse Farming	11.0
Nature Reserves and Conservation Parks Operation	80.1
Other Horse and Dog Racing Activities	17.8
Physiotherapy Services	77.3
Sport and Camping Equipment Retailing	60.1
Sport and Physical Recreation Administrative Service	66.8
Sport and Physical Recreation Clubs and Sports Professionals	143.4
Sports and Physical Recreation Instruction	81.6
Sports and Physical Recreation Venues, Grounds and Facilities Operation	136.7
Toy and Sporting Goods Wholesaling	75.3
Toy, Sporting and Recreational Product Manufacturing	17.3
Turf Growing	0.0
<b>TOTAL</b>	<b>1,167.1</b>
<b>Share of the National Sport and Recreation Sector (per cent)</b>	<b>36.9%</b>
<b>Contribution to Regional GDP (per cent)</b>	<b>1.5%</b>

Source: Statistics New Zealand, National Accounts (Industry Benchmarks) data and Census 2013 data.

## 4. The Sport and Recreation Sector – Broadly Defined

The sport and recreation sector can be defined more broadly than the 17 industries considered in the previous section. First, the 2013 Census recorded that, for the Auckland region, 47.3 per cent of people employed in sport and recreation *occupations* were employed outside the 17 sport and recreation *industries* considered in the previous section. Second, previous studies have emphasised the importance of central government spending on sport and recreation education in schools. Third, local councils spend millions of dollars constructing new sport and recreation facilities. Fourth, consideration must also be given to the market value of the substantial contributions made by volunteers in the sport and recreation sector. This section explains how these four contributions were valued.

### Employment in sport and recreation

Data on sport and recreation employment can be obtained from the New Zealand Census of Population and Dwellings. Normally held every five years, the Census includes questions asking New Zealand adults about their occupation in the job where they worked the most hours. For this study, 42 occupations were identified that depend *significantly* on sport and recreation activities in New Zealand. Figure 3 shows the number of people in Auckland recorded in the 2013 Census as employed in these 42 occupations, classified into five groups (see Table A5 in Appendix 3 for the underlying data). The overall number of people in Auckland engaged in sport and recreation occupations is significant. The total of 9,599 represents 1.5 per cent of all people employed in the region.

**Figure 3: Employment in Sport and Recreation Occupations, Auckland, 2013**

Source: Table A6 in Appendix 3.

The people employed in sport and recreation occupations were not necessarily employed in one of the 17 sport and recreation industries identified in the study. This is shown in Figure 4. As well as the 9,599 people employed in sport and recreation *occupations*, the 2013 Census analysis counted 13,164 people employed in sport and recreation *industries* in the Auckland region. This number of 13,164 represents 2.0 per cent of all people employed in the region.

**Figure 4: Employment in the Sport and Recreation Sector, Auckland, 2013**

Source: Statistics New Zealand, Census 2013 data.

Statistics New Zealand advises that 4,941 people in Auckland in these sport and recreation occupations were employed in sport and recreation industries. As shown in Figure 4, this means that 8,233 people were employed in sport and recreation industries but not in sport and recreation occupations and 4,658 people were employed in sport and recreation occupations outside the sport and recreation industries. Summing the three italicised statistics in Figure 4, the total count of employment in the sport and recreation sector in 2013 in Auckland was 17,822. This represents 2.7 per cent of all people employed in the region.

**The contribution of the wider employment sector**

Census data record the personal income earned by people employed in sport and recreation occupations. Using these data, the study estimated that the total annual personal income for people in the sport and recreation occupations in Auckland was \$354.0 million, which is 33.3 per cent of the income earned nationally in the 42 occupations (2013 values). For those employed in sport and recreation industries, these incomes are already counted in section 3. However, 48.5 per cent of people were employed outside the 17 industries, and so their income share, **\$171.8 million**, must be added in a broader definition of the sector. This calculation is shown in Table 3.

**Table 3: Income Earned Outside the Sport and Recreation Industries, Auckland, 2013**

	<b>Auckland (\$000s)</b>
Estimated Incomes from Census 2013	354,010.1
LESS Incomes earned in S&R Industries	182,233.1
Incomes earned outside S&R Industries (2013)	171,777.1

Source: Explained in Appendix 2.

### The contribution of spending on sport and recreation education

The New Zealand Government makes a substantial investment in sport and recreation education in schools. *The National Curriculum* specifies eight learning areas: English, the arts, health and physical education, learning languages, mathematics and statistics, science, social sciences, and technology. The third of these areas, 'health and physical education', includes seven items of which the last three are physical activity, sport studies and outdoor education. Hence, based on a count of these items, just over five per cent (i.e., three-sevenths of one-eighth) of *The National Curriculum* is related to sport and recreation.

Using Ministry of Education roll returns it is possible to estimate the share of this investment that occurs within the Auckland region, shown in Table 4. In 2013, 34.4 per cent of the country's students below Year 9 were in Auckland and 34.2 per cent of the country's students in Year 9 and above. Based on these ratios, the 2012/13 share of salaries for the sport and recreation components of *The National Curriculum* in Auckland was **\$65.0 million**.

**Table 4: Investment in School Sport and Recreation Investment, Auckland, 2012/13**

	<b>Auckland (\$000s)</b>
Year 8 and below students (number)	163,961
Year 9 and above students (number)	97,267
Year 8 and below students (per cent of national)	34.4%
Year 9 and above students (per cent of national)	34.2%
Year 8 and below students (investment, \$000)	\$37,826
Year 9 and above students (investment, \$000)	\$27,124
<b>Total investment (\$000)</b>	<b>\$64,951</b>

Source: Ministry of Education roll returns and authors' calculations.

## The contribution of local government

Statistics New Zealand undertakes an annual Local Authority Census to collect financial information on the activities of all New Zealand’s regional councils and territorial authorities (see the national report for more details). Its tables include an analysis of total operating income and expenditure by sixteen activities, one of which is ‘recreation and sport’. Figure 5 shows total local government operating expenditure on recreation and sport within the Auckland region for the financial years 2004 to 2013. Note that these data have not been adjusted for inflation. Table A11 in Appendix 3 shows that the spending on recreation and sport by the Auckland Council in 2012/13 was 14.2 per cent of its total operating spending. This was higher than the national average that year of 9.6 per cent.

**Figure 5: Local Government Operating Expenditure on Recreation and Sport, Auckland, 2003/04-2012/13**

Source: Statistics New Zealand Local Authority Census.

The Local Authority Census also collects information on net additions to local government fixed assets for recreation and sport. In the 2012/13 financial year for the country as a whole, this net investment was \$133.8 million. It should be noted that the figures between 2008/09 and 2010/11 were considerably higher at the national level than before or since, driven in part by facility upgrades for the Rugby World Cup. A similar trend can be seen for the Auckland region; see Figure 6. The value was \$81.2 million in 2012/13.<sup>7</sup>

<sup>7</sup> These data were provided by Statistics New Zealand for this report, drawing on the Local Authority Census. That source recorded no value for additions to fixed assets for recreation and sport for the Auckland Council in 2012/13, but further inquiries revealed that this was inaccurate. Sport New Zealand made a direct enquiry to the Auckland Council, who provided an estimate of the relevant net additions to assets for 2011/12 and 2012/13. Those estimates are included in Figure 6.

**Figure 6: Local Authority Net Additions to Recreation and Sport Fixed Assets, Auckland, 2003/04-2012/13**

Source: Statistics New Zealand Local Authority Census (and Auckland Council for 2012/13).

This level of spending has implications for the construction sector. Using national input-output data tables, spending of \$81.2 million on new facilities implies value added in the construction sector of **\$28.4 million**. Table 5 records the value-added in the construction sector by this activity for Auckland.

**Table 5: Value Added in the Construction Sector from Local Authority Net Additions to Recreation and Sport Fixed Assets, Auckland, 2012/13**

	Auckland (\$000s)
Net Expenditure on New Facilities	\$81,161
Value Added in the Construction Sector	\$28,406

Source: Explained in the text.

The contribution to regional GDP from the sport and recreation sector – broadly defined

Table 6 shows that including these three additional amounts increases the contribution to GDP in 2012/13 of the sport and recreation sector (broadly defined) in the Auckland region to **\$1,432.3 million**. Thus, the share of the sector broadly defined is **1.9 per cent of GDP**, as shown in the bottom half of Table 6.

**Table 6: Contribution to the Auckland Economy of the Sport and Recreation Sector – Broadly Defined, 2012/13**

Industry	Contribution to GDP (\$ millions)
Contribution of the sport and recreation sector – narrowly defined (see section 3)	1,167.1
Sport and recreation incomes outside the sport and recreation industries	171.8
Central government investment in sport and recreation education	65.0
Local government construction of new sport and recreation facilities	28.4
<b>TOTAL (\$ millions)</b>	<b>1,432.3</b>
Regional Gross Domestic Product (2012/13)	77,214.0
<b>TOTAL (percentage of regional GDP)</b>	<b>1.9%</b>

Source: Previous tables and figures as explained in the text.

The contribution of volunteers

Analysis of Sport New Zealand’s 2013/14 *Active New Zealand* Survey estimates that at the national level volunteers contributed 67.7 million hours to sport and recreation that year. The services produced by these volunteers are valuable to participants in sport and recreation and so it is possible to estimate the market cost if these services had been provided by employees instead of volunteers (see the national report for more details).

Estimates of volunteers in regions are also available from this source, *but readers are advised that small sample numbers mean that these figures must be used with caution*. They are reproduced here as indicative only.

The survey data suggest that the total amount of volunteered time contributed to sport and recreation in 2013/14 in Auckland was 22.1 million hours, or 32.7 per cent of the national total. Based on the same methodology used in the national report, the estimated market value of these regional services in 2013 values was **\$337.3 million**.

Including the market value of volunteer services in the calculations increases sport and recreation’s contribution to GDP to **\$1,769.6 million**. If it is assumed that the region’s amount of time spent on *all* volunteered activities was the same percentage share of the national level, then Table 7 shows that the sport and recreation sector’s share of regional GDP (including volunteered services) was **2.2 per cent**.

**Table 7: GDP Including the Value of Volunteered Services, Auckland, 2012/13**

	<b>Regional Gross Domestic Product</b>	<b>Volunteered Services</b>	<b>Extended Regional GDP</b>
Sport and recreation (\$m)	1,432.3	337.3	1,769.6
Totals (\$m)	77,214.0	1,613.5	78,827.5
Per cent	1.9%	20.9%	2.2%

## 5. The Auckland Regional Sports Trusts (RSTs)

Regional Sports Trusts (RSTs) are ‘umbrella’ organisations working in partnership across the broad sport and physical recreation spectrum, assisting regional sports organisations, schools and clubs as well as supporting individuals and community groups participating in less structured physical activity.

As noted in section 1, in May 2013, Aktive – Auckland Sport and Recreation was established as a charitable trust to provide a single point of contact, a regional voice and leadership to improve consistency of delivery across Auckland, while allowing the four Auckland RSTs, **Harbour Sport; Sport Auckland; Sport Waitakere;** and **Counties Manukau Sport**, to focus on optimising local delivery to their communities.

This section provides some data on the value of sport and recreation in these four RSTs. Table 1 on page 2 provides lists of the Local Board Areas assigned to each RST for the analysis in this chapter. These lists are indicative only; nevertheless, the analysis in this section indicates the distribution of sport and recreation in Auckland between the four RSTs.

Appendix 3 provides raw data on Census 2013 employment in sport and recreation industries and occupations (see Tables A5 and A7 respectively). Figure 7 presents the combined data on sport and recreation employment in the four RSTs. As in Figure 4, the diagrams in this figure show employment in the sport and recreation *industries* and in the sport and recreation *occupations*, and show the overlap between these two employment categories.

Ranking the RSTs in terms of their share of sport and recreation employment as a percentage of total employment in their respective regions, the order is: Harbour Sport (3.6 per cent); Sport Auckland (2.7 per cent); Sport Waitakere (2.5 per cent); and Counties Manukau Sport (2.2 per cent).

Table 8 provides an estimate of the distribution of value-added for the seventeen sport and recreation industries, i.e. for the sector **narrowly defined**. Of the four RSTs, Harbour Sport has the greatest share, with an estimated value-added of \$404.6 million.

The amalgamation of local government into the Auckland Council means it is not possible to disaggregate the estimates for the broadly defined sector into the four RSTs.

**Figure 7: Employment in the Sport and Recreation Sector, Auckland RSTs, 2013**

Note: These data do not sum exactly to the data in Figure 4 because of rounding conventions used by Statistics New Zealand to preserve confidentiality for items with low numbers.

Source: Statistics New Zealand, Census 2013 data.

**Table 8: Contribution to GDP of Sport and Recreation Industries, Auckland RSTs, 2012/13**

Industry	Contribution to GDP (\$ millions)			
	Harbour	Waitakere	Auckland	Counties
Amusement and Other Recreation Activities (n.e.c.)	11.9	5.9	9.9	8.8

<b>Total (measured in 2008/09 values)</b>	<b>404.6</b>	<b>161.7</b>	<b>318.1</b>	<b>282.1</b>

Source: Statistics New Zealand, National Accounts data, Regional Gross Domestic Product data and Census 2013 data.

## 6. Conclusion

This report has estimated the contribution of the sport and recreation sector to the regional economy of Auckland. Three major results have been estimated:

- The contribution of the sport and recreation sector (narrowly defined) to regional GDP in 2012/13 is estimated to have been **\$1,167.1 million, or 1.5 per cent.**
- The contribution of the sport and recreation sector (broadly defined) to regional GDP in 2012/13 is estimated to have been **\$1,432.3 million, or 1.9 per cent.**
- The contribution of sport and recreation to GDP including volunteered services in 2012/13 is estimated to have been **\$1,769.6 million, or 2.2 per cent.**

Estimates also are provided for the **four Regional Sports Trusts** in the greater Auckland area, which show that:

- The contribution of the sport and recreation sector (narrowly defined) in the Harbour Sport region in 2012/13 is estimated to have been **\$404.6 million.**
- The contribution of the sport and recreation sector (narrowly defined) in the Sport Waitakere region in 2012/13 is estimated to have been **\$161.7 million.**
- The contribution of the sport and recreation sector (narrowly defined) in the Sport Auckland region in 2012/13 is estimated to have been **\$318.1 million.**
- The contribution of the sport and recreation sector (narrowly defined) in the Counties Manukau Sport region in 2012/13 is estimated to have been **\$282.1 million.**

All of these estimates are **conservative** because information is not available for all the industries that provide products and services for sport and recreation and regional information is not available to allow the direct personal and social benefits (such as increased work productivity and health benefits that result from active lifestyles) from participation in sport and recreation to be estimated. In addition, at the district/city level, it is not possible to estimate the value of volunteer services.

Future work to allow more comprehensive estimates will require more detailed survey information on participation and volunteer rates at the regional level, as well as information linking sport and recreation participation with labour productivity and improved health outcomes.

Given the conservative approach taken to produce the estimates in this report, and given the significant items that have not been included in the analysis, future work is likely to show that the value of sport and recreation to the Auckland region is considerably higher than estimated here.

# Appendix 1:

## Regions in the Sport New Zealand Study

The reports commissioned by Sport New Zealand for this study cover the 13 regions listed in Table A1. Where appropriate, each regional report includes an analysis of the main urban territorial authority within its boundaries. The exceptions are Auckland (which has been one unitary council since 1 November 2010; in this case estimates are provided for the four areas that approximate to the boundaries of the four regional sports trusts), Gisborne (one unitary council) and the Bay of Plenty (which includes two urban territorial authorities in its analysis).

**Table A1: Regions and Urban Areas Analysed in the Sport New Zealand Reports**

	<b>Regions</b>	<b>Smaller Urban Areas</b>
1	Northland	Whangarei District
2	Auckland	Harbour Sport, Sport Waitakere, Sport Auckland and Counties Manukau Sport
3	Waikato	Hamilton City
4	Bay of Plenty	Tauranga City
		Rotorua District
5	Gisborne	
6	Hawke's Bay	Napier City plus Hastings District
7	Taranaki	New Plymouth District
8	Manawatu-Wanganui	Palmerston North City
9	Wellington	Wellington City
10	Tasman/Nelson/Marlborough	Nelson City
11	Canterbury/West Coast	Christchurch City
12	Otago	Dunedin City
13	Southland	Invercargill City

The New Zealand Census of Population and Dwellings collects information on the primary occupation of New Zealand adults, as well as the industry of that primary occupation. For the purposes of this study, 42 occupations and 17 industries were identified as part of the sport and recreation sector. Table A2 shows the number of people employed in the sport and recreation sector in the thirteen regions used in the study, drawn from the 2013 Census. Figure A1 shows the distribution of employment in Auckland, other urban areas (defined as the smaller urban areas in Table A1 excluding the Auckland region) and the rest of New Zealand.

**Table A2: Distribution of Employment in the Sport and Recreation Sector, 2013**

Region	Number	Per Cent
Northland	1,767	3.3%
Auckland	17,822	33.1%
Waikato	5,697	10.6%
Bay of Plenty	3,438	6.4%
Gisborne	416	0.8%
Hawke's Bay	1,593	3.0%
Taranaki	1,206	2.2%
Manawatu-Wanganui	2,342	4.3%
Wellington	5,748	10.7%
Tasman/Nelson/Marlborough	2,028	3.8%
Canterbury/West Coast	7,314	13.6%
Otago	3,281	6.1%
Southland	1,256	2.3%
<b>TOTAL</b>	<b>53,906</b>	<b>100%</b>

Note: Data based on 42 occupations (including three occupations give a weighting of 0.5 – see note on Table A5) and 17 industries after allowing for the overlap between the two counts.

## Appendix 2: Details of the Report's Calculations

### Calculating share of regional GDP

Statistics New Zealand publishes estimates of GDP on a quarterly basis, but it takes time to complete an analysis of contributions to gross domestic product by industry. Thus, the latest available analysis at the time of writing the national report was for the year ending March 2012. The published data are at a reasonably aggregated level, so that the lowest level for the main sport and recreation industries is termed 'Arts and Recreation Services'. Only some of this category belongs in an analysis of sport and recreation, and so the standard approach (which was used for the national report) is to use Census employment data to estimate the share of smaller segments. This is best illustrated by a worked example.

The contribution to gross domestic product (GDP) in 2011/12 of the entire 'Arts and Recreation Services' sector is estimated to have been \$3,030 million. In the 2013 Census, total employment in this sector was recorded at 36,279. Within the sector, the number of people employed in the 'Sport and Physical Recreation Clubs and Sports Professionals' industry was 2,055. Hence the employment ratio for this industry is  $2,055/32,691 = 0.0629$ . Based on this ratio, the contribution to GDP by the 'Sport and Physical Recreation Clubs and Sports Professionals' industry is estimated as 0.0629 times \$3,030 million = \$190.5 million.

Similarly, it is possible to produce regional estimates by calculating the region's employment ratio for each industry included in a sector. The number of people employed in the 'Sport and Physical Recreation Clubs and Sports Professionals' industry in Auckland in 2013, for example, was 1,521. Hence the Auckland employment ratio for this industry is  $1,521/32,691 = 0.0419$  and an initial estimate of its contribution to GDP in 2012/13 is 0.0419 times \$3,030 million equals \$125.5 million. Adjustments can then be made for regional variations in average productivity and to update the value for 2012 values to 2013 values. Thus the estimated regional contribution to the Auckland economy of this industry in 2012/13 is \$143.4 million. Similar calculations have been made for every industry in each region for this study.

This figure estimates the 'value added' by the industry; that is, it estimates the income (gross of taxes) generated within the industry, excluding the value of goods and services provided by other industries as inputs. The delay in producing the sector analysis of GDP, and the need to use 2013 Census employment figures, mean that these data are not as up-to-date as some analyses in this report. Nevertheless, the contribution to GDP is typically taken as the most important indicator of a sector's size in the national economy.

New Zealand now has official regional GDP data estimated by Statistics New Zealand. Table A3 shows the share of each region's contribution to national GDP for 2012/13, measured in that year's prices.

**Table A3: Distribution of Regional GDP at 2012/03 Prices, 2012/03**

Region	\$millions	Per Cent
Northland	5,346	2.5%
Auckland	77,214	35.9%
Waikato	18,686	8.7%
Bay of Plenty	11,249	5.2%
Gisborne	1,536	0.7%
Hawke's Bay	5,973	2.8%
Taranaki	8,558	4.0%
Manawatu-Wanganui	8,662	4.0%
Wellington	29,045	13.5%
Tasman/Nelson/Marlborough	5,945	2.8%
Canterbury/West Coast	28,917	13.4%
Otago	9,230	4.3%
Southland	4,955	2.3%
<b>TOTAL</b>	<b>215,315</b>	<b>100%</b>

Source: Statistics New Zealand, Regional Gross Domestic Product data.

### Calculating occupation incomes

The New Zealand census form asks people to state their total personal income from all sources, before tax, for the 12 months ending 31 March 2013. This study used the average salary for each occupation estimated in the national study to estimate the income earned by people in sport and recreation occupations in each region. Regional income data could not be used because of confidentiality concerns (the number of people earning within a certain income band in a certain occupation in a certain region can be very small). It is likely that this will tend to understate the incomes earned in Auckland and overstate the incomes earned in other parts of the country.

Table A8 in Appendix 3 shows how the income reported in the 2013 Census was distributed among the 42 occupations in Auckland. The largest contributing occupation was other sports coaches or instructors (\$56.1 million), followed by physiotherapists (\$55.3 million). The total income earned in the 42 occupations is estimated to have been \$354.0 million, which is 33.3 per cent of the income earned nationally in the 42 occupations.

It is important to note that there is some overlap between the incomes recorded in Table A8 and the contributions to GDP recorded in Table 2 of Section 3. In particular, the incomes earned in the sport and recreation industries of Table 2 by people employed in the sport and recreation occupations of Table A8 are included in both tables.

Consequently, to provide an estimate of the contribution of the sport and recreation sector broadly defined that includes the incomes of people in sport and recreation occupations outside the sport and recreation industries (narrowly defined), the proportion of income earned by people in the sport and recreation occupations within the sport and recreation industries must be removed to avoid double-counting. This is achieved using the data in Figures 4 and 5.

## Appendix 3: Sport and Recreation Data Tables

**Table A4: Employment in Sport and Recreation Industries, Auckland, 2013**

Industry	Auckland
Amusement and Other Recreation Activities (n.e.c.)	387
Amusement Parks and Centres Operation	495
Boatbuilding and Repair Services	1,158
Health and Fitness Centres and Gymnasia Operation	1,719
Horse and Dog Racing Administration and Track Operation	144
Horse Farming	243
Nature Reserves and Conservation Parks Operation	849
Other Horse and Dog Racing Activities	189
